Potential Hidalgo Airport Sites

Preliminary Boundary Areas

MITRE is assisting Aeropuertos y Servicios Auxiliares (ASA) in collaboration with the Office of the Governor of the State of Hidalgo in identifying a feasible site for developing a new, one-runway airport in Hidalgo. The figures contained in this document (not in order of priority) show the dimensions and coordinates of the areas being considered by MITRE at this time. The information is preliminary and subject to change, and is only being provided to assist officials of the State of Hidalgo in conducting preliminary non-aeronautical investigations of potential issues that could impede airport construction. Examples of potential impediments include soil/subsoil composition, flooding, existing infrastructure, environmental and archeological concerns, and any other potentially disruptive conditions. The State of Hidalgo should also examine whether the potential airport sites are appropriate from a social, political, land acquisition, and environmental point of view.

Please send to MITRE the information requested above by 30 June 2014.
